EDUCATION

University of California, Irvine

Expected Graduation: **March 2028**

B.S. in Computer Science

- Spec. Architecture and Embedded Systems

Relevant Coursework: Computer Organization, Embedded Software, Data Structures (C++), Discrete Math.

RELEVANT EXPERIENCE

Bosch | System Engineering Intern

June 2026 - September 2026

- Embedded within the Vehicle Computer Engineering department of the Cross-Domain Computing division.
- Supporting RF development for Zone ECU platforms within Bosch's next-generation vehicle architecture.
- Contributing to the setup, configuration, and validation of RF test bench environments for prototype evaluation and performance verification.
- Assisting in customer technical specifications into structured system-level engineering requirements for ECU integration.

UCI Cancer Center | Digital Communications Assistant

November 2025 - Present

- Designed trigger-based pipelines and scheduled flows to replace manual reporting, reducing processing time by ~60% and minimizing human error.
- Developed workflows using Microsoft Power Automate to ingest, transform, and distribute website performance data across platforms, including Drupal and QuestionPro.

UCI | Learning Assistant (ICS 32)

September 2025 - December 2025

- Supported 30+ students in mastering advanced Python concepts (software libraries, APIs, data handling) through guided problem-solving, office hours, and lab sessions.

TENKI JAPAN | Software Engineer Intern

June - September 2025

- Developed a custom HubSpot CRM to link calls, emails, and external inputs directly into the pipeline. Automated workflows, eliminating manual entry. Saving 6+ hours per week with sales tracking and reporting.
- Built a *FastAPI webhook* with GPT-4o to summarize calls, extract phone and email contacts, and reduce false positives in lead data, increasing verification efficiency by 40%, making sales follow-ups faster and reliable.

Cognitive Anteater Robotics Laboratory | Undergraduate Researcher

December 2024 - June 2025

- Trained optical *PyTorch/Tensor CNN models* for prey detection and predator avoidance in autonomous robots.
- Implemented SLAM-based episodic memory systems to improve spatial/temporal awareness and efficiency.

ZotMeal | Software Developer

November 2024 - June 2025

- Developed mobile and web application used by 5000+ UCI students with *React Native, Expo, Next.js*, and Tailwind CSS to monitor real-time menu updates across dining halls.
- Built backend services with *tRPC* and *PostgreSQL/DrizzleORM* to ensure efficient, reliable data handling.
- Implemented authentication, menu personalization, push notifications, and food ratings to boost engagement.

ACHIEVEMENTS

National Robocup Soccer Champion | *RoboCup*

June 2023- June 2024

- Designed a fully autonomous soccer robot using *Fusion 360* and C++ in a team of 4.
- Custom PCBs, integrating sensors, microcontrollers, OpenMV camera, and PID control for precision.
- Developed custom libraries for IR sensors, motor control, and color detection, for ball tracking and strategies.
- Led the team to 1st place in Canada and Innovation Award, qualified to represent Canada at the World RoboCup in the Netherlands.

TECHNICAL SKILLS

Languages: Java, C++, Python, JavaScript, TypeScript

Developer Tools: Git, Docker, Google Cloud, Firebase, SolidWorks, Figma

Technologies: React Native, Expo, Next.js, tRPC, Node.js, FastAPI, Express.js, RESTful APIs, WebRTC, Tailwind CSS, PostgreSQL, Firebase Firestore, Drizzle ORM

Hardware & Robotics: PCB Design/Circuitry, OpenMV/Camera, CAD Modeling

(Human) Languages: English (Fluent), Japanese (Fluent)
